PhD Graduate of 2016

Manage your work, study and life

AeU strives to create an environment where its students thrive, working around schedules to help students succeed academically.

WHETHER students are looking to advance their careers, pursue a new career path or gain knowledge in a different industry, studying for a relevant qualification is one of the best ways to improve prospects, giving them work fulfilment.

However, the idea of going back to university may seem tedious, difficult or even like a step in the wrong direction.

With the right learning mode, studying while working may be easier than some may think. In fact, many students graduate with flying colours while holding down a demanding full-time job.

At Asia e University (AeU), students can choose a learning mode that fits their lifestyle, whether it is attending classes in either a part- or full-time mode or an entirely online format.

The same rigorous curriculum is applied across all modes. AeU's

unique, flexible approach to learning means students do not have to put their lives on hold to get a qualification.

AeU students access coursework, attend live classes and connect with classmates and academicians through a personalised online learning platform known as myPLS.

The advanced personalised learning features a combination of self-paced lectures, specially designed video content, interactive case studies and collaborative projects.

Through the use of innovative technologies and in-person immersion experiences, students learn alongside other global professionals around the world.

By combining the connectivity and familiarity of a social networking platform with world-class content delivery tools, myPLS allows students

to easily access every facet of their course no matter what device they are using. From the myPLS platform, students can also schedule one-on-one sessions with professors or lecturers hosted in the live classroom or create their own live classroom with

networking events, social groups or study sessions.

Through this unique flexible learning option, high-quality e-learning materials and tailored support, students can balance work, family and study commitments without putting their lives on hold.

Personalised learning

AeU appreciates that its students are not just professionals who have to balance study, career and family. Some students may come home while others study before or after work. Some even study while travelling.

If students relocate in pursuit of their career, they simply continue their study programme as usual. Students can take as long or short a time they need to complete their study programme.

They can even take a break should their personal or career

circumstances change. AeU strives to create an environment where its students thrive, working around schedules to help students succeed academically. It is one of the reasons many people choose to study at AeU.

Global network of alumni

AeU is proud of its community of more than 11,000 graduates who span more than 100 countries and are making a positive impact as leaders and innovators within their communities and professions around the world.

Many global alumni who are living proof that AeU studies are flexible, enabling students to balance work, family and studies.
